1 Literature review

Introduce the literature review

1.1 Prior and current efforts to digitize zoning data

Describe the National Zoning Atlas and affiliated teams, MAPC data, the Georgia Tech effort. Others?

1.2 Other open data standards for local government

Describe GTFS, GBFS, MDS, OpenStreetMap others? Are there any examples not in mobility?

2 Method

This section describes the zoning standard and the analysis method. This will be the

2.1 Zoning standard

Describe the zoning standard

2.2 Analysis of accessory dwelling unit capacity

Describe both a naive approach that would be the best you can do with other methods and the approach we could take with this data.

2.2.1 Naive approach

Best you could do with a spreadsheet

2.2.2 Proposed approach

Figures and tables with captions can also be cross-referenced from elsewhere in your book using \@ref(fig:chunk-label) and \@ref(tab:chunk-label), respectively.

See Figure 1.

```
par(mar = c(4, 4, .1, .1))
plot(pressure, type = 'b', pch = 19)
```

Don't miss Table 1.

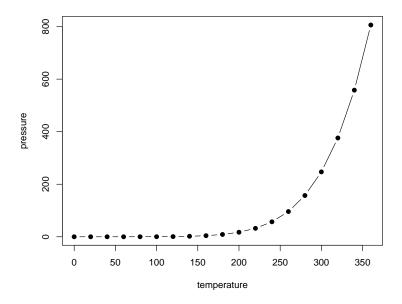

Figure 1: Here is a nice figure!

```
knitr::kable(
  head(pressure, 10), caption = 'Here is a nice table!',
  booktabs = TRUE
)
```

3 Results

This section will show the ADU capacity of a place based on the two approaches described in the methods section.

4 Discussion

This will be the discussion section

5 Conclusion

This will be the conclusion

Table 1: Here is a nice table!

temperature	pressure
0	0.0002
20	0.0012
40	0.0060
60	0.0300
80	0.0900
100	0.2700
120	0.7500
140	1.8500
160	4.2000
180	8.8000
